

Igor Grossmann

Igor Grossmann is a social and cultural psychologist, computational social scientist, and Professor of Psychology at the University of Waterloo, Canada. His research examines how people, societies, and AI systems navigate uncertainty: what makes judgment wise, how culture shapes it, and how well we can forecast societal change. His work combines experiments and large multi-country studies with archival time-series analysis, forecasting tournaments, natural language processing, and large language models. He has founded and led large-scale collaborative initiatives, including the Forecasting Collaborative, the International Wisdom Summit, the [Futurescape](#) project, and the [Wise Judgment Consortium](#), which test how well experts and the public anticipate societal change and take the science of judgment beyond Western-centric models.

Grossmann's research has been widely published in top-tier outlets, including *Science*, *Nature Human Behaviour*, *PNAS*, *Annual Review of Psychology*, *Trends in Cognitive Sciences*, *Science Advances*, *Nature Communications*, *JPSP*, *Psychological Science*, and the Conference on Language Modeling (COLM). His contributions have been recognized with awards including a Humboldt Prize from the Alexander von Humboldt Foundation and the Joseph B. Gittler Award from the American Psychological Foundation. He is a Fellow of the Society for Personality and Social Psychology and an elected member of the College of the Royal Society of Canada.

Grossmann serves as the Editor-in-Chief of *Psychological Inquiry* and Associate Editor of *American Psychologist*, and has held associate editor roles for journals such as *Emotion* and *Social Psychological and Personality Science*. He also co-hosts the "On Wisdom Podcast," bringing the science of wisdom and judgment to a broad audience. His work has been featured on *Hidden Brain*, the BBC, and German public television. Professor Grossmann holds a Ph.D. in psychology from the University of Michigan.
